Microbiology Abstracts

nual Subject, Species & Authoriex to Volume 4, 1975

Section C Algology, Mycology & Protozoology

LIBRARY

Microbiology Abstracts, Section C commenced publication in 1972 and is published monthly. Each issue contains about 700 abstracts followed by an author and species index.

Arrangement of Abstracts

The table of contents shows the full scope of the journal. Every paper citing non-industrial aspects of algae, fungi, lichens and protozoa, including micro- and macro-scopic species is included. Within each section abstracts are arranged taxonomically in the order: algae, fungi, lichens, and protozoa. Abstracts are allocated to the section (subsection) to which they are most relevant and cross-referred to other sections (subsections) where appropriate.

Bibliographic data

Titles of English language papers are quoted verbatim, and English translations of foreign language papers are provided. In the case of papers in the European languages, excluding those using non-Latin alphabets, the original title is also quoted. Bibliographic details cited are the names of all authors, journal title, volume and issue numbers, page numbers and date of publication. The address given is that from which reprints are obtainable and is the address of the first-named author unless some other author's name is asterisked. Journal titles are abbreviated in accordance with the procedures laid down by the American National Standards Institute. The language in which the paper is written and the language(s) in which a summary is provided are indicated at the end of the abstract.

The abstract

The IRL editorial policy is as follows: where the author's summary or abstract, as published in the source journal, is written in English and is editorially acceptable, it is cited verbatim except for (a) minor alterations (concerned principally with style), and (b) abbreviations (see inside back cover). In all other cases new abstracts are prepared based as far as possible on any abstract or summary provided in the source journal.

Coverage

In compiling each month's issue, IRL's editorial staff monitor approximately 4300 primary journals and other source

references for papers falling within the scope of Microbiology Abstracts, Sec

Annual indexes

A subject and species index is compile simultaneously with the preparation issue and is supplied together with a cumulative author index after complet of the volume.

Copies of abstracted material
Due to copyright restrictions the publicannot supply copies of material from the abstracts are prepared. However, provided the necessary copyright declarations are made, copies will nor be obtainable from your local library. In of difficulty, the publishers will be pleat to give any assistance they can.
